

Fomo Baby

REBASE TOKEN

WHITEPAPER

Introduction

Fomo Baby Developers have constantly noticed in the current crypto space that even good projects die after few days because buyers always look at the graphs and no one buys a dying graph which is usually the case with many coins.

So, we at Fomo Baby decided to develop and launch a revolutionary state of the art "rebasing contract" that will reduce the circulating supply and adjust the price accordingly by constantly burning tokens.

Our rebasing feature is strategically designed to increase the price every hour by a process called "rebasing". This will allow the charts to stay green and always in an uptrend position at all times causing new investors to Fomo in.

What is Fomo Baby?

Fomo Baby is a deflationary rebasing token with an automated liquidity feature which ensures that the price will constantly rise until it reaches \$1

Our state of the art contract will also have a NFT marketplace , Staking options , buy back and weekly lottery draws!

What is Rebase?

A rebase (or price-elastic) token is designed in a way that the circulating token supply decreases automatically according to token's price fluctuations. This is called a rebase mechanism.

What happens from the users' point of view?

The amount of tokens in each wallet will decrease accordingly. Yet the total value of each wallet does not change, thanks to the rebasing mechanism, you will only see an uptrend in the graphs!

How it works?

To keep things simple we have narrowed down the process and let me explain in the easiest way possible.

Say you are holding 200 tokens of Fomo Baby at \$1 per token price, which means you have \$200. Once the price rebase feature is implemented you will have 100 tokens at \$2 per token price.

As you can see you will still own the same dollar amount as you did before the rebase however, the price has doubled causing the charts to stay green.

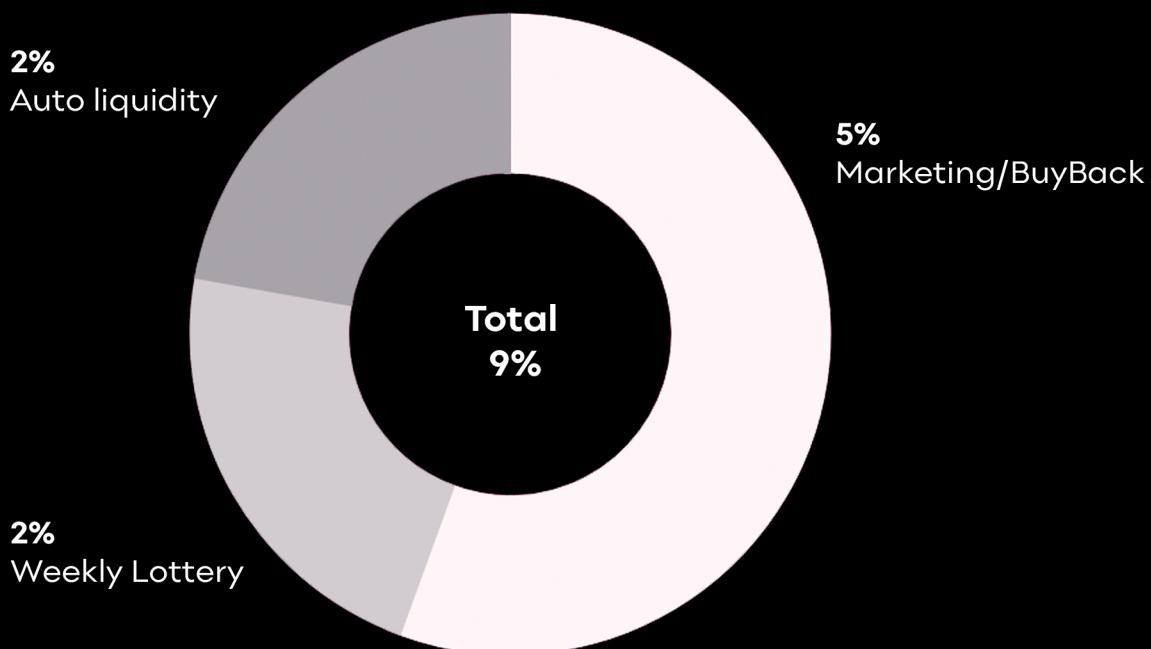

The Benefits

This Feature is more of a marketing technique and does not benefit our holders in any way however, being able to maintain a healthy green chart will differentiate us from other tokens and will help us to trend on different platforms due to constant high increase in price.

This will cause the token to have a large exposure thus bringing new investors to our token all the time.

Having green and healthy charts has been scientifically proven to attract daily investors who are looking for profitable quick investments and that's exactly what we are going to achieve with Fomo baby.
